Your Notes

CSS Position

position : static is an default property.

position : relative

In Position : relative we moved the html element relative to its original position.

Position : absolute.

Position : fixed

position sticky

Z-index

Position: Fixed;   **škıll** academy

- When the element position is set to absolute, the element will scroll when the user scrolls the document.

- We can fix an element to a specific position on the page (regardless of user scrolling) by setting its position to fixed, and accompanying it with the familiar offset properties top, bottom, left, and right.

- Example:
```
header {
    background-color: #466995;
    border-bottom: 1px solid #466995;
    position: fixed;
    width: 100%;
}
```
